Safety is the cornerstone of our airport activities, and we are unwavering in our commitment to prioritizing it at every level. To uphold this commitment, the Mesa Gateway Airport Authority (MGAA) established a Safety Management System (SMS) program for Mesa Gateway Airport (IWA) in compliance with Federal Aviation Administration (FAA) standards. This program encompasses all airport staff, first responders, regulatory agencies, tenants, and other users at IWA.

As part of our SMS implementation, we affirm our commitment to the following safety principles:

- Foster a culture of safety throughout all airport activities, emphasizing the significance of safety in our daily activities and the benefits of an effective Safety Management System (SMS).
- The Airport's senior leadership is fully committed to the implementation and success of the SMS.
- Encourage all employees, tenants, and other users to report hazards confidentially without fear of reprisal.
- We are dedicated to continuously improving safety measures at IWA.
- Ensure the effectiveness of the SMS by providing skilled and trained personnel, along with the necessary resources to ensure the safe operation of Gateway Airport.
- We will comply with all applicable local, state, and federal legislative and regulatory requirements and standards related to safety.

All personnel are responsible for reporting any information that may affect the safety of flights, persons, facilities, and equipment. Individuals are not disciplined as part of the SMS program.

Let's continue to work together to make safety a top priority at Mesa Gateway Airport.

J. Brian O'Neill, A.A.E.
Executive Director/CEO
